**PET PACKAGING:  
A BOON FOR  
PLANET EARTH**

PRESENTATION BY  
**Team relpet**  
Total Packaging Solution

**The DNA of freshness has our PET in it.**

The biggest challenge for the food packaging sector has been to ensure optimum food protection with the minimum and sustainable usage of plastic for primary and secondary packaging. You can still get the same level of protection and freshness in each step and still be healthy, natural and truly sustainable. Specialty formulators for multiple applications and multiple media.

## What are Plastic Closures?

**Material Used**

- High Density Polyethylene (HDPE) which is used in food grade segment and 100% recyclable.
- The raw material is sourced from Reliance Industries and Haldiya Petro, with ample capacity to supply to liquor industry.

**Manufacturing Process**

- Manufacturing process of plastic closures are fully automated with zero manual intervention with online and offline camera monitoring to produce consistent quality product.

**Universal Usage**

- Companies such as Coca Cola, PepsiCo, Parle Agro, AMUL, etc., use closures made from this material for different products, making this a globally approved product.
- Customers around the world prefer plastic closures for daily use products.

## Manufacturing of Plastic Closures

- Plastic Closures can be made using two different technologies
  - Injection Moulding
  - Compression Moulding
- Compression Moulding
  - More suitable for mass production of the caps, with the capacity of making 2000 caps per minute.
  - More consistent and accurate
  - Has online and offline camera technology, that automatically rejects caps which don't meet machine specification. Therefore, double quality check takes place before dispatch to customers.
  - Big companies like AMUL, Parle Agro, Coca Cola, PepsiCo, etc. use this technology for their caps.

### Other Process Enhancement enzymes

**Viscozyme®**

- Used with non-corn feedstocks such as wheat, barley, rye, cassava
- Reduces viscosity allowing higher DS (dry solids) content
- Improves throughput and lowers energy consumption

**Provia®**

- Improved yeast nutrition through better amino-acid availability
- Increased conversion efficiency of protein-bound starch
- Reduced chemical costs for nitrogen addition

**Olexa®**

- Protease
- Increased ethanol production due to reduction in glycerol production
- Olexa releases bound oil to significantly increase corn oil yields

## Order Management System – Key Features

- Web based system with individual logins for all transporters
- 24x7 visibility of orders into the Transporter Login
- Flexibility to transporters of placing vehicles for an order Online – at anytime from anywhere
- Online submission, confirmation and processing of the forms
- Real-time alerts of activities and exceptions
- Daily email reports to transporters on execution summary and their individual performance against targets
- In-depth analytical reports available to management on transporter's performance evaluation metrics
- User defined algorithms for all sort of orders
- System can work standalone or together with existing ERP
